Aims and Scope

Microbial Ecology is an international journal whose aim is the advancement and dissemination of information describing the interactions between microorganisms and the biotic and abiotic components of their environments. *Microbial Ecology* features articles of original research and brief reviews. The Editor encourages submissions in the following areas:

- ecology of microorganisms in natural and engineered environments
- advances in molecular-based understanding of microbial interactions and phylogeny

- microbially driven biogeochemical processes
- interactions among microbial populations and communities
- microbial processes and interactions in extreme or unusual environments
- ecological studies pertaining to animal, plant and insect microbiology
- microbial processes and interactions associated with environmental pollution
- advances in technique

The exclusive copyright for all languages and countries, including the right for photomechanical and any other reproductions, also in microform is transferred to the publisher.

The use of registered names, trademarks, etc. in this publication does not imply, even in the absence of a specific statement, that such names are exempt for the relevant protective laws and regulations and therefore free for general use.
